# Revenue & Churn Analysis

## Executive Summary

| Total Customers | Total MRR | ARPU | Churn Rate | Revenue at Risk |
|---|---|---|---|---|
| 7043 | $456,117 | $64.76 | 27% | $139,131 |

Key Insights

- **Revenue concentration risk**

Month-to-month contracts drive $257K or 56% of total revenue but also exhibit the highest churn (43%).

- **Revenue exposure**

Approximately $139K of monthly recurring revenue is currently at risk due to potential churn.

## Churn Drivers & Revenue Stability Analysis

The structural drivers below explain the observeed churn patterns

- **Contract Stability**

Retention increases sharply with contract length: 57% for month-to-month vs 97% for two-year contracts.

- **Lifecycle Driver**

Customers within the first 6 months churn at 54%, highlighting onboarding as a critical retention stage.

- **Behavior Driver**

Customers using manual payment methods churn up to 3X more than those using automated payments.

- **Revenue Driver**

$139K or ~90% of the revenue gap is driven by customer volume rather than ARPU, indicating that contract structure—not pricing—is the primary factor behind revenue differences.
